## Redefining all terrain

Mountain Buggy's innovative and brilliant design philosophy just extended itself further to create the all new terrain™ – the ultimate in all terrain adventure, for parents who want to live a life without limit, from the mountain trails to the city streets.

Staying true to Mountain Buggy's DNA of simplicity, durability, manoeuvrability, and adaptability – the designers have re-engineered their bullet proof urban jungle™ platform, and enhanced these features with more sport performance technologies, functionalities and superior design to maximise a parent's freedom.

With powerful suspension, front wheel tracking device and 16" tyres, the terrain gives maximum stability and directional control across all terrain, and with the hand operated active brake, speed can be easily managed to slow or stop ensuring a comfortable and safe ride for the child. It has complete adaptability (for both carrycot and travel systems) and uncompromised child support, giving optimal posture with its structured and padded seating – far safer for a child's back and far superior than the softer hammock seating that is common in the market.

"We saw an obvious gap in the market for parents who wanted more full control of their buggy with their active lifestyle," says terrain's head designer Andrew Mawson, "There are no other buggies that could truly handle all terrain and last the distance, yet have the clean aesthetics to look good on the city streets. This was quite a design challenge! We did a lot of research, looking at what parents needed when out jogging and what functionality best suited their pursuits. We also had the great opportunity to meet with active parents and elite athletes, who offered us their sound knowledge and advice on building the best possible all terrain active buggy in the market, and I feel we have done just that."

So with maximum control, maximum performance – who wouldn't want to challenge the unknown?
